How does the **CLEAR CHOICE FIRE DISTILLER** work?

How it works...

1. Contaminated water is placed in the lower pan.
2. The water is brought to boil
3. Steam rises through the patent pending disks leaving contaminants behind.
4. The steam contacts the underside of the top pan with cooler water
5. High purity water droplets form on the underside of the top pan
6. Water collects in the stainless steel collector and drains through the spout.
7. The distilled drinking water passes through a carbon filter and into a glass or other container.

The Clear Choice Fire-Distiller System

CLEAR CHOICE FIRE-DISTILLER

The **Clear Choice Fire-Distiller**, is timely in its simplicity and effectiveness, using the distillation process - well known as the most effective single method for water purification. With the **Clear Choice Fire-Distiller** you **simply boil the water** of unknown quality, the steam rises through two specially designed stainless steel discs. The steam contacts the underside of a pan of cooler water and turns to extremely high purity water droplets, which are collected, in a drinking glass or other container.

There are **no moving parts**, it needs **NO electricity**, and **NO replacing** of expensive filters and the Fire-Distiller can be set up in less than one minute. Yet this product can remove over 99.99% of the dissolved matter in seawater (making it drinkable) while killing biological contaminants and leaving them behind in the boiled water. And relative to other distillers **its fast!**

All you need is a source of energy. There are many **alternatives:**

- an open fire
- a wood stove
- a camp stove
- most propane stoves
- even a charcoal grill if used in a well ventilated place

The **Clear Choice Fire-Distiller** is easy to store and lightweight. There's nothing like it on the market today.

Your **stainless steel Clear Choice Fire-Distiller** system consists of:

- a boiling pan
- patent-pending disks
- an upper condensing pan
- carbon post filter
- a length of high-temperature medical-grade silicon tubing.
